

## ◀ LEVELLEASE

Our license-plate frame reads, "If it's not fun, we don't want to do it!" However, there are times when we slightly modify this optimistic phrase into, "This isn't fun, but we have to do it!" Such is the sentiment when standing out in the elements attempting to position our fifth-wheel so that it's level, or when we have to connect or disconnect it from the hitch. Since finding LevelEase, with a single press of a button, our fifth-wheel moves into the exact position we select — regardless of terrain or slope.

Tilt-sensor technology is what makes LevelEase so simple for one person to operate solo. LevelEase completely replaces the existing manual up/down

# HANDS ON

switch with one-touch control for disconnect position, leveling, connect position and leg retraction. The installation placement of the control box may be mounted inside any compartment of your fifth-wheel, provided it's within 4 feet of the jack motor for proper operation.

We chose to install the control box inside the front compartment simply because there were no other options within the vicinity of the jack leg with the motor. (Another route would be to install an access door in a convenient location of your choice.) The kit contains all that you'll need to install the unit, including terminals and specific length wires. The leg pin can be installed in the third hole of the drop leg, eliminating the need to bend down and drop the legs each time you disconnect.

Let's say you've been parked for a week and you discover that your jack pads have sunken several inches into the ground. LevelEase tilt sensor technology remembers the original disconnect position. With one touch of a button, the device positions the landing gear to the preset height so that you can easily connect or disconnect the truck without any assistance.

Installing the LevelEase is simple: Connect four wires and attach the retract sensor — that's it. Our install was complete in just a little more than one hour.

LevelEase is available direct from the manufacturer and sells for \$295. It comes with a lifetime warranty and friendly customer service.
